

“This school is designed for veterans.”

Phil Ruscoe,
National Service Manager

Apex Fenner's Splicing School takes experienced technicians deep into the craft of belt splicing.

“They already know how to splice,” says Phil Ruscoe. “But at the end of the one week School, with access to our factory test lab, they have learned why as well.”

Along the way Phil does a bit of myth busting if he finds anyone straying off track.

Apex Fenner, as a leader in the supply of conveyor belting world wide, has developed splicing systems that ensure optimum conveyor performance.

We set up the Splicing School to enhance skill levels and improve understanding of what makes a good vulcanised join. The course covers every type of splice – ply step, solid woven PVC, and steel cord.

Attendees leave the course as more effective splicers with a good understanding of the vulcanising process. The course forms an important part of getting a Level 3 Splicing Certificate, the highest qualification achievable.

Apex Fenner is renowned for its technical training and safety record. We don't cut corners.

Because at the end of the day we want Phil and all the people he trains home safe with their families.
